

Retrofit

Retrofit your compression equipment at a fraction of the cost of purchasing new equipment.

Our dedicated Retrofit team is comprised of seasoned industry experts with deep experience in current and non-current natural gas compression equipment. We can provide retrofit solutions that will increase operating efficiency, horsepower utilization and operational flexibility.

Close collaboration and open communication are how our Retrofit team stands apart from the others. Our customers repeatedly tell us they value and appreciate the transparency we bring to the table with all of our jobs. Our quotes and schedules are collaboratively developed, and our clients know that when project-related challenges arise, we will work through them together, and do our utmost to maintain the budget and the schedule.

We work on all types of reciprocating and rotary compressor packages. Approximately 75% of our retrofits are done in the field, with the rest executed at Compass' facilities in Calgary or Grande Prairie, Alberta, or in Casper, Wyoming.

Retrofit services include:

- Recylindering
- Restaging
- Major component replacements
- Package modularization
- Sweet to sour conversion
- Driver changes
- Cooler resectioning
- Control panels and instrumentation
- Noise controls solutions
- Emissions controls solutions
- Pulsation and vibration mitigation

Optimization services include:

- Compressor configuration analysis
- Compressor reconfiguration recommendations
- Consultation services for new natural gas fields and developed fields

We offer quick response times through our strategically located service branches, overhaul shops and parts warehouses, decreasing your downtime and operating costs. We are committed to providing our customers with expert solutions and exceptional experiences through all stages of a project.
