

Natural-Gas-Engine-Driven Generator Packages

Power whenever, and wherever you need it.

Our reliable, GenSet packages help ensure your gas plant keeps operating, no matter what.

We provide standard and custom-designed power generation packages using natural gas-driven engines that can be used in multiple applications. These units can be used as continuous, or standby power depending on your specific needs.

Our GenSet packages are designed and fabricated in our Frontier shop, by our team of experts, which means we control the costs, the timeline and the product quality, enabling us to meet even the most challenging budgets and schedules.

Our GenSet offerings are based on the reliable Waukesha VGF and VHP natural gas engine series engines providing 50 and 60 Hz power capability from 300-1800 kW.

Our packaging capabilities allow our packages to be installed in the harshest climates and meet the most stringent noise specifications.

With our integrated Process, Compression, Retrofit, Rentals, and Parts + Service Divisions, we are committed to providing our clients with expert solutions and exceptional experiences through all stages of a project.
